The Public Works Department provides any services to the community, which are not directly reflected on citizens' utility bills and are not part of the public safety network.

Water Conservation Program

Did you Know?

- The human body is about 75% water.
- Everyday in the United States, we drink about 110 million gallons of water.
- Showering and bathing is one of the largest users (27%) of water domestically.
- Less than 2% of the Earth's water supply is fresh water.
- The average American uses 140-170 gallons of water per day.
- A leaky faucet can waste 100 gallons a day.

Tips:

- Run your dishwasher and washing machines only when they are full.
- When washing a car, use soap and water from a bucket. Use a hose with a shut-off nozzle for rinsing.
- Never put water down the drain when there may be another use for it such as watering a plant or garden, or cleaning.
- Avoid flushing the toilet unnecessarily. Dispose of tissues, insects and other such waste in the trash rather than the toilet.
- When washing dishes by hand, fill one sink or basin with soapy water. Quickly rinse under a slow-moving stream from the faucet.
- Store drinking water in the refrigerator rather than letting the tap run every time you want a cool glass of water.
- Water lawns during the early morning hours, or evening when temperatures and wind speed are the lowest. This reduces losses from evaporation.
- Do not hose down your driveway or sidewalk. Use a broom to clean leaves and other debris from these areas. Using a hose to clean a driveway can waste hundreds of gallons of water.
- Take short showers instead of baths. A full bathtub requires about 36 gallons of water.
- Conserve water because it is the right thing to do!!!
